## **74LVC1GX04** X-tal driver

Product specification

2003 Aug 13

**X-tal driver****74LVC1GX04****FEATURES**

- Wide supply voltage range from 1.65 to 5.5 V
- 5 V tolerant input and a 5 V overvoltage tolerant powered down output.
- High noise immunity
- Complies with JEDEC standard:
  - JESD8-7 (1.65 to 1.95 V)
  - JESD8-5 (2.3 to 2.7 V)
  - JESD8B/JESD36 (2.7 to 3.6 V).
- $\pm 24$  mA output drive ( $V_{CC} = 3.0$  V)
- CMOS low power consumption
- Latch-up performance exceeds 250 mA
- Direct interface with TTL levels
- SOT363 and SOT457 package
- ESD protection:
  - HBM EIA/JESD22-A114-A exceeds 2000 V
  - MM EIA/JESD22-A115-A exceeds 200 V.
- Specified from  $-40$  to  $+85$  °C and  $-40$  to  $+125$  °C.

**DESCRIPTION**

The 74LVC1GX04 is a high-performance, low-power, low-voltage, Si-gate CMOS device and superior to most advanced CMOS compatible TTL families.

Inputs can be driven from either 3.3 or 5 V devices. This feature allows the use of this device as translator in a mixed 3.3 and 5 V environment.

This device is fully specified for partial power-down applications using  $I_{off}$  at output Y. The  $I_{off}$  circuitry disables the output Y, preventing the damaging backflow current through the device when it is powered down.

The 74LVC1GX04 combines the functions of the 74LVC1GU04 and 74LVC1G04 to provide a device optimized for use in crystal oscillator applications.

The integration of the two devices into the 74LVC1GX04 produces the benefits of a compact footprint, lower power dissipation and stable operation over a wide range of frequency and temperature.

**QUICK REFERENCE DATA**GND = 0 V; T<sub>amb</sub> = 25 °C.

SYMBOL	PARAMETER	CONDITIONS	TYPICAL	UNIT
t <sub>PHL</sub> /t <sub>PLH</sub>	propagation delay input X1 to output X2	V <sub>CC</sub> = 1.8 V; C <sub>L</sub> = 30 pF; R <sub>L</sub> = 1 kΩ	2.1	ns
		V <sub>CC</sub> = 2.5 V; C <sub>L</sub> = 30 pF; R <sub>L</sub> = 500 Ω	1.7	ns
		V <sub>CC</sub> = 2.7 V; C <sub>L</sub> = 50 pF; R <sub>L</sub> = 500 Ω	2.5	ns
		V <sub>CC</sub> = 3.3 V; C <sub>L</sub> = 50 pF; R <sub>L</sub> = 500 Ω	2.1	ns
		V <sub>CC</sub> = 5.0 V; C <sub>L</sub> = 50 pF; R <sub>L</sub> = 500 Ω	1.6	ns
	propagation delay input X1 to output Y	V <sub>CC</sub> = 1.8 V; C <sub>L</sub> = 30 pF; R <sub>L</sub> = 1 kΩ	4.4	ns
		V <sub>CC</sub> = 2.5 V; C <sub>L</sub> = 30 pF; R <sub>L</sub> = 500 Ω	2.9	ns
		V <sub>CC</sub> = 2.7 V; C <sub>L</sub> = 50 pF; R <sub>L</sub> = 500 Ω	3.0	ns
		V <sub>CC</sub> = 3.3 V; C <sub>L</sub> = 50 pF; R <sub>L</sub> = 500 Ω	2.8	ns
		V <sub>CC</sub> = 5.0 V; C <sub>L</sub> = 50 pF; R <sub>L</sub> = 500 Ω	2.3	ns
C <sub>I</sub>	input capacitance		5	pF
C <sub>PD</sub>	power dissipation capacitance per buffer	output enabled; notes 1 and 2	35	pF

**Notes**

- C<sub>PD</sub> is used to determine the dynamic power dissipation (P<sub>D</sub> in μW).

$$P_D = C_{PD} \times V_{CC}^2 \times f_i \times N + \sum(C_L \times V_{CC}^2 \times f_o) \text{ where:}$$

f<sub>i</sub> = input frequency in MHz;f<sub>o</sub> = output frequency in MHz;C<sub>L</sub> = output load capacitance in pF;V<sub>CC</sub> = supply voltage in Volts;

N = total load switching outputs;

Σ(C<sub>L</sub> × V<sub>CC</sub><sup>2</sup> × f<sub>o</sub>) = sum of outputs.

- The condition is V<sub>i</sub> = GND to V<sub>CC</sub>.

**FUNCTION TABLE**

See note 1.

INPUT	OUTPUT	
X1	X2	Y
H	L	H
L	H	L

**Note**

- H = HIGH voltage level;  
L = LOW voltage level.

## RECOMMENDED OPERATING CONDITIONS

SYMBOL	PARAMETER	CONDITIONS	MIN.	MAX.	UNIT
$V_{CC}$	supply voltage	note 1	1.65	5.5	V
$V_I$	input voltage		0	5.5	V
$V_O$	output voltage	note 2 active mode	0	$V_{CC}$	V
		Power-down mode; $V_{CC} = 0$ V	0	5.5	V
$T_{amb}$	operating ambient temperature		-40	+125	°C
$t_r, t_f$	input rise and fall times	$V_{CC} = 1.65$ to $2.7$ V	0	20	ns/V
		$V_{CC} = 2.7$ to $5.5$ V	0	10	ns/V

## Notes

- For use of a regular crystal oscillator, the recommended minimum  $V_{CC}$  should be 2.0 V.
- Only for output Y.

## LIMITING VALUES

In accordance with the Absolute Maximum Rating System (IEC 60134); voltages are referenced to GND (ground = 0 V).

SYMBOL	PARAMETER	CONDITIONS	MIN.	MAX.	UNIT
$V_{CC}$	supply voltage		-0.5	+6.5	V
$I_{IK}$	input diode current	$V_I < 0$	-	-50	mA
$V_I$	input voltage	note 1	-0.5	+6.5	V
$I_{OK}$	output diode current	$V_O > V_{CC}$ or $V_O < 0$	-	±50	mA
$V_O$	output voltage	active mode; notes 1 and 2	-0.5	$V_{CC} + 0.5$	V
		Power-down mode; notes 1 and 2	-0.5	+6.5	V
$I_O$	output source or sink current	$V_O = 0$ to $V_{CC}$	-	±50	mA
$I_{CC}, I_{GND}$	$V_{CC}$ or GND current		-	±100	mA
$T_{stg}$	storage temperature		-65	+150	°C
$P_D$	power dissipation	$T_{amb} = -40$ to $+125$ °C	-	300	mW

## Notes

- The input and output voltage ratings may be exceeded if the input and output current ratings are observed.
- When  $V_{CC} = 0$  V (Power-down mode), the output voltage can be 5.5 V in normal operation.

## X-tal driver

**APPLICATION INFORMATION**

Crystal controlled oscillator circuits are widely used in clock pulse generators because of their excellent frequency stability and wide operating frequency range. The use of the 74LVC1GX04 provides the additional advantages of low power dissipation, stable operation over a wide range of frequency and temperature and a very small footprint. This application information describes crystal characteristics, design and testing of crystal oscillator circuits based on the 74LVC1GX04.

**Crystal Characteristics**

Figure 8 is the equivalent circuit of a quartz crystal.

The reactive and resistive component of the impedance of the crystal alone and the crystal with a series and a parallel capacitance is shown in Figure 9.

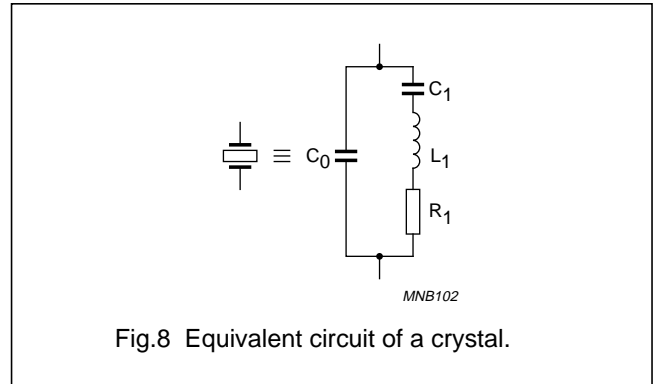

Figure 9 also shows that with a specified load capacitance ( $C_L$ ), the load resonance frequency ( $f_L$ ) is the same for a circuit with either a series (b) or parallel (c) capacitance.  $C_L$  is specified by crystal manufacturers and is used in determining the value of the external components of the oscillator.

# X-tal driver

# 74LVC1GX04

### Design

Figure 10 shows the recommended way to connect a crystal to the 74LVC1GX04. This circuit is basically a Pierce oscillator circuit in which the crystal is operating at its fundamental frequency and is tuned by the parallel load capacitance of C<sub>1</sub> and C<sub>2</sub>. C<sub>1</sub> and C<sub>2</sub> are in series with the crystal. They should be approximately equal. R<sub>f</sub> is the drive-limiting resistor and is set to approximately the same value as the reactance of C<sub>1</sub> at the crystal frequency (R<sub>f</sub> = X<sub>C1</sub>). This will result in an input to the crystal of 50% of the rail-to-rail output of X2. This keeps the drive level into the crystal within drive specifications (the designer should verify this). Overdriving the crystal can cause damage.

The resistor R<sub>f</sub> provides negative feedback and sets a bias point of the inverter near mid-supply, operating the 74LVC1GU04 in the high gain linear region. The value of R<sub>f</sub> is not critical, typically it is set at 1 MΩ.

To calculate the values of C<sub>1</sub> and C<sub>2</sub>, the designer can use the formula:  $C_L = \frac{C_1 \times C_2}{C_1 + C_2} + C_s$

C<sub>L</sub> is the load capacitance as specified by the crystal manufacturer, C<sub>s</sub> is the stray capacitance of the circuit (for the LVC1GX04 this is equal to an input capacitance of 5 pf).

### Testing

After the calculations are performed for a particular crystal, the oscillator circuit should be tested. The following simple checks will verify the prototype design of a crystal controlled oscillator circuit. Perform them after laying out the board:

- Test the oscillator over worst-case conditions (lowest supply voltage, worst-case crystal and highest operating temperature). Adding series and parallel resistors can simulate a worse case crystal.
- Insure that the circuit does not oscillate without the crystal.
- Check the frequency stability over a supply range greater than that which is likely to occur during normal operation.
- Check that the start up time is within system requirements.

As the 74LVC1GX04 isolates the system loading, once the design is optimized, the single layout may work in multiple applications for any given crystal.

## DATA SHEET STATUS

LEVEL	DATA SHEET STATUS <sup>(1)</sup>	PRODUCT STATUS <sup>(2)(3)</sup>	DEFINITION
I	Objective data	Development	This data sheet contains data from the objective specification for product development. Philips Semiconductors reserves the right to change the specification in any manner without notice.
II	Preliminary data	Qualification	This data sheet contains data from the preliminary specification. Supplementary data will be published at a later date. Philips Semiconductors reserves the right to change the specification without notice, in order to improve the design and supply the best possible product.
III	Product data	Production	This data sheet contains data from the product specification. Philips Semiconductors reserves the right to make changes at any time in order to improve the design, manufacturing and supply. Relevant changes will be communicated via a Customer Product/Process Change Notification (CPCN).

## Notes

1. Please consult the most recently issued data sheet before initiating or completing a design.
2. The product status of the device(s) described in this data sheet may have changed since this data sheet was published. The latest information is available on the Internet at URL <http://www.semiconductors.philips.com>.
3. For data sheets describing multiple type numbers, the highest-level product status determines the data sheet status.

## DEFINITIONS

**Short-form specification** — The data in a short-form specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.

**Limiting values definition** — Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 60134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

**Application information** — Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors make no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

## DISCLAIMERS

**Life support applications** — These products are not designed for use in life support appliances, devices, or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips Semiconductors customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors for any damages resulting from such application.

**Right to make changes** — Philips Semiconductors reserves the right to make changes in the products - including circuits, standard cells, and/or software - described or contained herein in order to improve design and/or performance. When the product is in full production (status 'Production'), relevant changes will be communicated via a Customer Product/Process Change Notification (CPCN). Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no licence or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified.
