Innovation and Value in Waveform Design

The AFG-21100/21000 Series Arbitrary Function Generators are DDS based signal generators covering the output of Sine, Square, Ramp, Noise and 20MSa/s Arbitrary waveform. The 0.1Hz resolution and 1% – 99% adjustable duty cycle of Square(Pulse) waveform greatly extend its application range in various fields.

The AFG-21100/21000 Series includes 6 models in three frequency bands of 5MHz, 12MHz and 25MHz. Besides the features of AFG-21100 Series also carries additional features of AM/FM/FSK Modulation, Sweep and Frequency Counter. The 3.5” color LCD will clearly display the digital waveform parameters set through front panel. The entire Series is equipped with USB Device interface for remote control and importing waveform data from PC.

**Built-In Arbitrary Waveform Function**

20MSa/s sampling rate, 10 bit vertical resolution and 4k point memory equip AFG-21100/21000 Series the arbitrary waveform capacity. User can create waveform by mean of either point by point input from front panel or PC software.

**Amplitude and DC Offset Display**

In addition to the setting parameters, the amplitude, DC offset values are also displayed on the LCD screen. Three amplitude units, Vpp, Vrms and dBm, can be selected and exchanged.

**1% Adjustable Duty Cycle of Square Wave**

The AFG-21100/21000 Series provides 1% – 99% variable duty cycle for its square waveform output. This feature allows generating the pulse waveform to simulate a spike signal or a transient signal.

**AM/FM/FSK, Sweep, Counter(AFG-21100 only)**

All AFG-21100 models are equipped with additional AM/FM/FSK Modulation, Sweep and Frequency Counter functions. The 150MHz frequency counter saves user the cost of purchasing a standalone frequency counter.

**Fully Digital Entry Design**

The fully digital entry design of AFG-21000 Series Series improves the setting uncertainty of conventional Function Generator and therefore significantly increases the accuracy of its waveform output. The 3.5” LCD screen allows user to see the parameter value change in detail when the adjustment is in progress.

**Arbitrary Waveform Editing Software**

A free arbitrary waveform editing software is available which is used to edit the arbitrary waveform on PC. After completing the waveform editing, it can be downloaded to AFG through USB interface for waveform output.
